

Fast. Precise. Efficient.

The **Puller** not leaving any trace

Demarking works in an easy way.
Modern technique – best quality

MADE IN GERMANY

HIGH QUALITY

EFFICIENCY — STABILITY — ECONOMIC VIABILITY

Without a trace!

A temporary marking tape has to be removed permanent and accurate when the original markings are needed again. With our new Puller demarking works are very easy.

The Puller is the perfect tool to demark temporary road markings – amendments are usually not necessary.

Marking and demarking

Not only the temporary road markings are ensuring a smooth traffic but also professional demarkings. When the road work measurements are finished the temporary markings are useless and distracting – a conscientious and neat demarking is needed. With our innovative tape winding machine Puller this is not a problem.

Puller – a demarking professional

Our demarking machine is a pro. Just two operators and the Puller are needed for neat demarking works. The Puller is winding the marking tape without any remainders – easy, efficient, fast.

Ecology-minded thinking

We do not leave any remainders; we rather provide materials for recirculation. Thus we save our environment and relieve our customers. Because they do not have to dispose of the temporary marking tape.
